Section 1

Safety Information

Throughout this manual and on machine decals, you will find precautionary statements (“CAUTION”, “WARNING”, and “DANGER”) followed by specific instructions. These precautions are intended for the personal safety of the operator, user, servicer, and those maintaining the machine.

DANGER

Danger indicates the presence of a hazard that **will** cause **severe** personal injury, death, or substantial property damage if the danger is ignored.

WARNING

Warning indicates the presence of a hazard that **can** cause **severe** personal injury, death, or substantial property damage if the warning is ignored.

CAUTION

Caution indicates the presence of a hazard that **will** or **can** cause **minor** personal injury or property damage if the caution is ignored.

Additional precautionary statements (“IMPORTANT” and “NOTE”) are followed by specific instructions.

IMPORTANT

The word “IMPORTANT” is used to inform the reader of specific procedures where minor machine damage will occur if the procedure is not followed.

NOTE

The word “NOTE” is used to communicate installation, operation, maintenance or servicing information that is important but not hazard related.

In the interest of safety, some general precautions relating to the operation of this machine follow.

	<h2>WARNING</h2>
<ul style="list-style-type: none">• Failure to install, maintain and/or operate this product according to the manufacturer's instructions may result in conditions which can produce serious injury, death and/or property damage.• Do not repair or replace any part of the product or attempt any servicing unless specifically recommended or published in this Service Manual and unless you understand and have the skills to carry out the servicing.• Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the product is properly grounded and to reduce the risk of fire, electric shock, serious injury or death. <p data-bbox="1404 1686 1469 1705">W006R2</p>	

Section 1 Safety Information

IMPORTANT INFORMATION: During the lifetime of your tumble dryer, it may require service. The information contained in this manual was written and is intended for use by qualified service technicians who are familiar with the safety procedures required in the repair of your tumble dryer, and who are equipped with the proper tools and testing equipment.

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W240

WARNING

Repairs that are made to your products by unqualified persons can result in hazards due to improper assembly or adjustments subjecting you or the inexperienced person making such repairs to the risk of serious injury, electrical shock or death.

W007

CAUTION

If you or an unqualified person perform service on your product, you must assume the responsibility for any personal injury or property damage which may result. The manufacturer will not be responsible for any injury or property damage arising from improper service and/or service procedures.

W008

NOTE: The WARNING and IMPORTANT instructions appearing in this manual are not meant to cover all possible conditions and situations that may occur. It must be understood that common sense, caution and carefulness are factors which CANNOT be built into this tumble dryer. These factors MUST BE supplied by the person(s) installing, maintaining or operating the tumble dryer.

Always contact your dealer, distributor, service agent or the manufacturer on any problems or conditions you do not understand.

Locating An Authorized Service Person

Alliance Laundry Systems is not responsible for personal injury or property damage resulting from improper service. Review all service information before beginning repairs.

Warranty service must be performed by an authorized technician, using authorized factory parts. If service is required after the warranty expires, Alliance Laundry Systems also recommends contacting an authorized technician and using authorized factory parts.

Section 2

Introduction

Model Identification

Information in this manual is applicable to these tumble dryer models:

	Gas		Steam/Thermal Oil		Electric	
25 Pound (220 Liter)	DA0220SRG	JT0220SRG	DC0220SSH	JC0220SSL	DC0220SEL	JT0220SEL
	DC0220SFG	LT0220SRG	DC0220SSL	JT0220SSH	DT0220SEL	PC0220SEL
	DC0220SRG	PC0220SFG	DT0220SSH	JT0220SSL	GC0220SEL	PT0220SEL

Replacement Parts Information

If replacement parts are required, contact the source from whom you purchased the unit or contact Alliance Laundry Systems at (920) 748-3950 for the name and address of the nearest authorized parts distributor. For technical assistance, call (920) 748-3121.

Wiring Diagram

The Wiring Diagram is located behind the control panel on the Stand Alone Tumble Dryer and inside the junction box cover on the Stacked Tumble Dryer.

Nameplate Location

IMPORTANT: When writing for information on any tumble dryer, be sure to mention model and serial numbers. Model and serial numbers will be found on nameplate as shown above.

SAFETY WARNINGS AND DECALS

Safety Warnings and Decals have been provided in key locations to remind you of important precautions for the safe operation and maintenance of your tumble dryer. Please take the time to review these warnings before proceeding with service work.

All decals have been designed and applied to withstand washing and cleaning. Decals should be checked periodically to be sure they have not been damaged, removed, or painted. Refer to the parts manual for ordering replacement decals.

How Your Tumble Dryer Works

The tumble dryer uses heated air to dry loads of laundry.

1. When the motor is started, the exhaust fan pulls room temperature air in through the air intake at the rear of the tumble dryer and over the heat source (burner flame for gas, heating element for electric, and coil for steam).
2. The heated air moves into the cylinder, where it is circulated through the wet load by the tumbling action of the cylinder.
3. The air then passes through the lint filter, exhaust fan, and is vented to the outdoors.

Section 3

Troubleshooting

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

IMPORTANT: Refer to wiring diagram for aid in testing tumble dryer components.

1. TUMBLE DRYER DOES NOT START

POSSIBLE CAUSE	TO CORRECT
Cylinder door is open.	• Close cylinder door completely.
Drying timer is in an off position. (Manual Timer Models)	• Turn drying timer on.
Incorrect amount of coins inserted into coin drop.	• Check that proper amount of coins are inserted.
Inoperative coin drop.	• Test coin drop and replaced if inoperative.
PUSH-TO-START button not properly activated. (Manual Timer Models)	• Press and hold in PUSH-TO-START button for three seconds.
Electrical power off or circuit breaker fuse blown.	• Check power supply, or replace fuses.
Lint panel/drawer open.	• Close and lock lint panel/drawer.

2. MOTOR DOES NOT START

POSSIBLE CAUSE	TO CORRECT
Electrical power off or circuit breaker fuse blown.	Check power supply, or replace fuses.
Loading door switch or lint drawer switch not closed or inoperative switch.	Close door, drawer or test switch and replace if inoperative.
Door switch improperly adjusted.	Refer to SECTION 6 in this manual for door switch adjustment.
Start circuit not complete.	Press and hold in PUSH-TO-START button for three seconds.
Inoperative motor.	Have motor tested and replace if inoperative.
Broken, loose, or incorrect wiring.	Refer to wiring diagram.
Fan or fan motor binding.	Replace fan or motor assembly.
Cylinder or cylinder motor binding.	Replace cylinder, bearing, rollers, or motor assembly.

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

3. MOTOR OVERLOAD PROTECTOR CYCLES REPEATEDLY

POSSIBLE CAUSE	TO CORRECT
Incorrect voltage	• Refer to <i>Installation Instructions</i> (supplied with tumble dryer) for electrical requirements.
Clothes load is too large.	• Remove part of load.
Clothes cylinder is binding.	• Check cylinder for binding.
Inadequate wiring.	• Check with local power company to ensure that wiring is adequate.
Inadequate make-up air.	• Refer to <i>Installation Instructions</i> (supplied with tumble dryer) for make-up air requirements.
Lint buildup around tumble dryer, poor housekeeping.	• Clean lint accumulation on and around the motors.
Broken, loose or incorrect wiring.	• Refer to wiring diagram.

4. MOTOR RUNS BUT CYLINDER DOES NOT TURN

POSSIBLE CAUSE	TO CORRECT
Broken cylinder belt.	• Replace cylinder belt.
Cylinder is binding.	• Check cylinder for binding.

5. MOTOR DOES NOT STOP

POSSIBLE CAUSE	TO CORRECT
Inoperative door switch or lint drawer switch.	• Test switches and replace if inoperative.
Inoperative coin drop.	• Test coin drop and replace if inoperative.
Incorrect wiring.	• Refer to wiring diagram.
Electronic control inoperative.	• Replace electronic control.

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

6. BURNER DOES NOT IGNITE

POSSIBLE CAUSE	TO CORRECT
Improper or inadequate exhaust system.	<ul style="list-style-type: none"> • Refer to <i>Installation Instructions</i> (supplied with tumble dryer) for exhaust system requirements.
Blown fuses or tripped circuit breaker in external electric supply line.	<ul style="list-style-type: none"> • Check fuses or circuit breaker.
Drying selector set in the “Cool Down” portion of cycle.	<ul style="list-style-type: none"> • Reset switch on microprocessor.
Inoperative cabinet thermostat.	<ul style="list-style-type: none"> • Test thermostat and replace if inoperative.
Insufficient gas supply.	<ul style="list-style-type: none"> • Open partially closed gas shut-off valve, or correct low gas pressure. Check manifold pressure and adjust to pressure specified on rating plate. If pressure cannot be obtained, have your local gas company check main gas pressure.
Incorrect orifices.	<ul style="list-style-type: none"> • Tumble dryer is equipped for type of gas specified on rating plate. If orifices are different from that specified on rating plate, obtain and install correct orifices.
Lint buildup.	<ul style="list-style-type: none"> • Clean lint compartment. Check damper for lint accumulation. Check ductwork for lint build-up.
Inadequate duct work and make-up air.	<ul style="list-style-type: none"> • Refer to <i>Installation Instructions</i> (supplied with tumble dryer) to ensure that ductwork and make-up air openings are sized accurately.
Inoperative airflow switch.	<ul style="list-style-type: none"> • Test switch and replace if inoperative.
Airflow switch out of adjustment.	<ul style="list-style-type: none"> • Refer to SECTION 6 in this manual for airflow switch adjustment.
Lint drawer/panel not closed properly.	<ul style="list-style-type: none"> • Unlock and open lint drawer/panel, close drawer/panel on tumble dryer (ensuring a tight fit) then lock.
Broken, loose, or incorrect wiring.	<ul style="list-style-type: none"> • Refer to wiring diagram.
Improper igniter to burner tab clearances.	<ul style="list-style-type: none"> • Set gap as described in SECTION 5, Paragraph 36.
Valve coils inoperative.	<ul style="list-style-type: none"> • Check valve coils and replace if necessary.
Blown fuse on tumble dryer.	<ul style="list-style-type: none"> • Check fuse (located in junction box) and replace if necessary.
Gas shut-off valve in the closed position.	<ul style="list-style-type: none"> • Open shut-off valve.
Ground wire from Instant Electronic Ignition (IEI) board not connected to ground terminal.	<ul style="list-style-type: none"> • Connect ground wire to ground terminal.
Inoperative IEI control.	<ul style="list-style-type: none"> • Replace IEI control.
Inoperative motor switch.	<ul style="list-style-type: none"> • Replace motor.

(continued)

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

6. BURNER DOES NOT IGNITE (continued)

POSSIBLE CAUSE	TO CORRECT
Instant Electronic Ignition (IEI) control in safety lockout.	<ul style="list-style-type: none"> • Reset IEI control by opening and closing tumble dryer door. (Non-EU models only) • Reset IEI by pressing reset button on back of unit. (EU models only)

7. BURNER IGNITES AND GOES OUT REPEATEDLY

POSSIBLE CAUSE	TO CORRECT
Insufficient gas pressure.	• Check gas supply and pressure.
Inoperative cabinet thermostat.	• Test thermostat and replace if inoperative.
Improper or inadequate exhaust system.	• Refer to Installation Instructions (supplied with tumble dryer) for exhaust systems requirements.
Improper orifices.	• Tumble dryer is equipped for type of gas specified on rating plate. If orifices are different from that specified on rating plate, obtain and install correct orifices.
Broken, loose or incorrect wiring.	• Refer to wiring diagram.
Excessive igniter to burner clearance.	• Set gap as described in SECTION 5, Paragraph 36 .
Inadequate make-up air.	• Refer to Installation Instructions (supplied with tumble dryer) for make-up air requirements.

8. BURNER DOES NOT SHUT OFF

POSSIBLE CAUSE	TO CORRECT
Impurities on gas valve seat, preventing valve from closing.	• Replace gas valve.
Incorrect wiring.	• Refer to wiring diagram.

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

9. CLOTHES DO NOT DRY

POSSIBLE CAUSE	TO CORRECT
Not enough heating time allocated for the load.	• Start tumble dryer cycle again with enough time to dry load.
Burner does not ignite.	• Refer to <i>Paragraph 6</i> .
Too much water in articles being dried.	• Remove excess water.
Clothes load too large.	• Remove part of load. Maximum load is 25 lb. dry weight (cotton load) for 25 lb. tumble dryer, etc.
Improper or inadequate exhaust system.	• Refer to <i>Installation Instructions</i> (supplied with tumble dryer) for exhaust system requirements.
Burner ignites and goes out repeatedly.	• Refer to <i>Paragraph 7</i> .
Drying selector improperly set.	• Set selector for higher setting.
Incorrect voltage.	• Refer to <i>Installation Instructions</i> (supplied with tumble dryer) for electrical requirements.
Inadequate make-up air.	• Refer to <i>Installation Instructions</i> (supplied with tumble dryer) for make-up air requirements.
Exhaust duct to the outside blocked.	• Clean duct to remove blockage.
Clogged lint screen.	• Clean lint screen.
Inoperative thermistor	• Replace thermistor.
Exhaust damper binding.	• Adjust damper so it turns freely.

10. TUMBLE DRYER OVERHEATING

POSSIBLE CAUSE	TO CORRECT
Incorrect main burner orifices.	• Obtain and install correct orifices.
Gas pressure too high or low.	• Adjust gas pressure as specified on rating plate.
Inadequate make-up air.	• Refer to <i>Installation Instructions</i> (supplied with tumble dryer) for make-up air requirements.
Lint buildup.	• Clean lint compartment. Check damper for lint accumulation. Check ductwork for lint build-up.
Restricted or inadequate exhaust system.	• Remove obstruction or lint build up from exhaust ductwork. Refer to <i>Installation Instructions</i> (supplied with tumble dryer) for exhaust system requirements.
Inoperative thermistor sensor.	• Check wiring to ensure temperature sensor is connected. Replace temperature sensor if necessary.
Exhaust damper binding.	• Adjust damper so it turns freely.

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

11. BURNERS NOT BURNING PROPERLY

POSSIBLE CAUSE	TO CORRECT
Dirt in burners.	• Disassemble burners and blow out the dirt.
Gas pressure too high or low.	• Check rating plate on back of tumble dryer for correct gas pressure.
Incorrect orifices.	• Tumble dryer is equipped for the type of gas specified on rating plate. If orifices are different from that specified on rating plate, obtain and install correct orifices.
Restricted or blocked exhaust duct.	• Disassemble and clean exhaust system.
Airflow switch not functioning properly.	• Replace airflow switch.
Inadequate make-up air.	• Refer to <i>Installation Instructions</i> (supplied with tumble dryer) for make-up air requirements.

12. CYLINDER DOOR OPENS DURING OPERATION

POSSIBLE CAUSE	TO CORRECT
Tumble dryer improperly leveled.	• Refer to <i>SECTION 6</i> in this manual for leveling leg adjustment.
Excessive load in tumble dryer.	• Remove part of load and restart tumble dryer.

NOTE: All tumble dryer panels must be in place and on the machine for proper operation.

Section 4

Grounding

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

WARNING

To reduce the risk of fire and electric shock, check with a qualified serviceperson for proper grounding procedures. Improper connection of the equipment grounding conductor may result in a risk of electric shock.

W068R1

WARNING

To reduce the risk of fire and electric shock, if electrical supply is coming from a three phase service, DO NOT connect a “High Leg” or “Stinger Leg” to a single phase machine. On a three phase machine, if there is a “High Leg” or “Stinger Leg” it should be connected to L3.

W069

Grounding Instructions

This tumble dryer must be grounded. In the event of malfunction or breakdown, grounding will reduce the risk of electric shock by providing the path of least resistance for electric current. This tumble dryer must be connected to a grounded metal, permanent wiring system; or an equipment grounding conductor must be run with the circuit conductors and connected to the appropriate ground location.

NOTE: To ensure protection against shock, this tumble dryer **MUST** be electrically grounded in accordance with local codes, or in the absence of local codes, with the latest edition of the National Electrical Code ANSI/NFPA No. 70. In Canada the electrical connections are to be made in accordance with CSA C22.1 or the latest edition of the Canadian Electrical Code, Part I and/or local codes. Electrical work should be done by a qualified electrician.

WARNING

All electrical connections should be made by a qualified electrician.

To reduce the risk of electrical shock, de-energize the electrical circuit being connected to the tumbler before making any electrical connections. Never attempt to connect a live circuit.

W070

Notes

[illegible]

Section 5

Service Procedures

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

IMPORTANT: When reference is made to the left or right hand direction in this manual, it is from the service person's position facing the front of the tumble dryer.

13. LOADING DOOR ASSEMBLY

Refer to *Figure 1*.

- Open loading door.
- While supporting door, remove two screws from hinge cam at top of door and slide door out of the bottom hinge.
- Remove door.

Figure 1

14. DOOR HINGE

Refer to *Figures 1* and *2*.

- Open loading door.
- While supporting door, remove two screws from hinge cam at top of door and slide door out of the bottom hinge.
- Remove door.
- Remove nuts and screws holding hinge to door frame. Refer to *Figure 2*.

15. DOOR HANDLE

Refer to *Figure 2*.

- Open loading door.
- Remove screws holding door handle to door.

Figure 2

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

16. FRONT PANEL

Refer to *Figure 3*.

STACKED TUMBLE DRYER

- a. Unlock and remove upper lint drawer. (For lower tumble dryer, both upper and lower lint drawers need to be removed.) Then remove two screws in upper lint compartment opening.
- b. Unlock controls and remove. Refer to *Paragraph 18*.
- c. Remove two screws at the loading door hinge. Refer to *Figure 1*.

- d. While supporting front panel, remove screws holding front panel to cabinet, leaving one screw on the top.
- e. Pull bottom of panel away from tumble dryer far enough to disconnect door switch wires.

NOTE: Refer to wiring diagram when rewiring electronic control.

- f. Remove remaining screw at top and remove front panel.

Figure 3

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

STAND ALONE TUMBLE DRYER

Refer to *Figure 4*.

- a. Unlock and remove top access panel.
- b. Unlock and remove lint panel.
- c. Remove two screws at the loading door hinge lug. Refer to *Figure 1*.
- d. Remove eight screws holding front panel to cabinet, leaving one screw on the top.

- e. Support front panel and pull bottom of panel away from the tumble dryers far enough to disconnect door switch wires.
- f. Remove remaining screw at top.

NOTE: Refer to wiring diagram when rewiring electronic control.

- g. Remove front panel.

Figure 4

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

17. DOOR SWITCH (ALL MODELS)

Refer to *Figure 5*.

- a. Remove two screws from loading door hinge lug. Refer to *Figure 1*.
- b. Remove screws from bottom of front panel. Refer to *Figure 4*.

STACKED TUMBLE DRYERS ONLY:

Remove lint drawer and screws. Refer to Paragraph 16.

- a. Loosen screws at top of front panel.
- b. Tilt front panel out and away from tumble dryer.
- c. Disconnect wires to door switch.

NOTE: Refer to wiring diagram when rewiring door switch.

- d. Press switch tabs in and push switch out through front panel.

WARNING

To reduce the risk of serious injury the door switch **MUST** be reinstalled after service is complete.

W241

Figure 5

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

DOOR SWITCH (EU Models)

Refer to *Figure 6*.

NOTE: EU Models are equipped with a second door switch.

- Remove two screws from the loading door hinge lug. Refer to *Figure 1*.
- Remove screws from top and sides of front panel and loosen screws at bottom of front panel. Refer to *Figure 4*.

STACKED TUMBLE DRYERS ONLY:

Refer to *Paragraph 16*.

- Remove lint drawer and screws.
- Tilt front panel out and away from tumble dryer only far enough to permit disconnecting wires from door switch.

NOTE: Refer to wiring diagram when rewiring door switch.

- Remove two screws and nuts holding door switch to bracket on inside of front panel.

Figure 6

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

18. CONTROL AND COIN DROP ASSEMBLY

STACKED TUMBLE DRYER

Refer to *Figure 7*.

- Unlock control/coin drop.
- Push down and in on bottom of control. Top of control will tilt forward.
- Pull control out far enough to disconnect wires.
- Remove control and place in a clean, dry location where it cannot be damaged.

IMPORTANT: Refer to wiring diagram when rewiring control.

Figure 7

STAND ALONE TUMBLE DRYER

Refer to *Figure 8*.

- Unlock top access panel over control and remove. Refer to *Figure 4*.
- Remove two screws from control door.
- Swing out control.
- Push up on control until top hinge clears slot.
- Disconnect wire harness from cabinet harness.
- Remove audit switch by pressing in on locking tabs, pull out through front.
- Remove control and place in a clean dry location where it cannot be damaged.

IMPORTANT: Refer to wiring diagram when rewiring control.

Figure 8

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

19. LINT PANEL/DRAWER

STACKED TUMBLE DRYER

Unlock drawer and pull out. Refer to *Figure 9*.

STAND ALONE TUMBLE DRYER

Coin

Unlock panel and remove. Refer to *Figure 8*.

OPL

Pull panel down from top. Refer to *Figure 8*.

Figure 9

20. LINT SCREEN

Refer to *Figure 9*.

STACKED TUMBLE DRYER

- Unlock and remove lint drawer.
- Remove lint screen.

STAND ALONE TUMBLE DRYER

- Unlock and remove lint panel. Refer to *Figure 8*.
- Apply pressure on top of screen to release screen from clip.
- Remove screen.

TO REPLACE SCREEN

- Drop bottom of screen between lugs on bottom. Refer to *Figure 9*.
- Secure top of screen behind clip.

21. LINT DRAWER SEAL

Refer to *Figure 10*.

STACKED TUMBLE DRYER

- Unlock and remove lint drawer.
- Remove damaged or worn seal from front panel.
- Degrease area where new seal is to be placed.

WARNING

For personal safety use degreaser/solvent only in a well ventilated area away from any open flames or sources of ignition.

W242

- When installing new seal, make sure it does not extend into lint drawer opening cavity.

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

Figure 10

22. LINT DRAWER/PANEL SWITCH

Refer to *Figure 11*.

STACKED TUMBLE DRYER

- Unlock and remove lint drawer. Refer to *Paragraph 19*.
- Unlock and remove left control.
- Disconnect harnesses.
- Remove four screws holding plate at rear of control box. Refer to *Figure 7*.
- Reach in through left control opening and disconnect wires from lint drawer switch terminal.
- Compress locking tabs on top and bottom of switch. Push switch through into lint drawer opening.

NOTE: When installing switch, switch lever must point toward rear of tumble dryer.

STAND ALONE TUMBLE DRYER

Refer to *Figure 12*.

- Remove front panel. Refer to *Figure 3*.

Figure 11

- Disconnect wires from lint panel switch.
- Remove two screws holding switch to switch mounting bracket.

Figure 12

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

23. JUNCTION BOX/CONTROL BOX

STACKED TUMBLE DRYER

- Remove four screws holding junction box cover in place. Refer to *Figure 28*.
- Remove junction box cover.

STAND ALONE TUMBLE DRYER

- Remove four screws holding control tray cover in place. Refer to *Figure 29*.
- Remove control tray cover.

Figure 13

24. FUSE AND FUSE HOLDER ASSEMBLY

Refer to *Figures 13, 14 and 15*.

NOTE: Fuse holder is located in the junction box at the rear of the machine. There is a fuse access door in the junction box cover for changing fuses.

- Remove junction box cover. Refer to *Paragraph 23*.
- Turn fuse cap counterclockwise to remove fuse.
- Disconnect wires from fuse holder.

NOTE: Refer to wiring diagram when rewiring fuse.

- Remove retaining nut holding fuse holder assembly to junction box and remove assembly.

Figure 14

Figure 15

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

25. CYLINDER ROLLERS

Refer to *Figure 16*.

- a. Unlock and remove lint drawer/panel. Refer to *Figure 11*.
- b. Remove control panel and control assembly.
- c. Remove front panel.
- d. Remove nuts from end of roller shafts. Refer to *Figure 16*.
- e. Lift cylinder slightly and remove rollers from shafts. Refer to *Figure 16*.

26. ROLLER SHAFT

Refer to *Figure 16*.

- a. Unlock and remove lint drawer/panel. Refer to *Figure 11*.
- b. Remove front panel. Refer to *Figures 3 and 4*.
- c. Remove cylinder rollers. Refer to *Paragraph 25*.
- d. Remove nuts from front and back of roller shaft.
- e. Slide shaft back out of air duct roller support assembly.

Figure 16

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

27. CYLINDER AND BEARING ASSEMBLY

STACKED TUMBLE DRYER

Refer to *Figure 17*.

- a. Unlock and remove upper lint drawer.
(For lower tumble dryer, both upper and lower lint drawers need to be removed. Remove two screws in upper lint compartment opening.)
Refer to *Paragraph 19*.
- b. Remove controls. Refer to *Paragraph 18*.
- c. Remove front panel. Refer to *Paragraph 16*.
- d. Remove palnut, jamnut and washer from cylinder shaft. Refer to *Figure 17*.
- e. Remove drive access cover at rear of tumble dryer. Refer to *Figure 18*.

CAUTION

To reduce the risk of injury, use care when reaching into cabinet through belt service door. The idler pulley could snap into place, causing injury.

W230

- f. Reach into cabinet and carefully apply downward pressure on idler pulley. Slide belt off motor pulley and then slowly release pressure on idler pulley. Refer to *Figure 18*.
- g. Pull cylinder out through front of cabinet.
- h. Install cylinder guide tool on cylinder shaft before reinstalling cylinder. Refer to *Figure 20*.

STAND ALONE TUMBLE DRYER

- a. Unlock and remove lint panel. Refer to *Paragraph 19*.
- b. Remove front panel. Refer to *Paragraph 16*.
- c. Remove palnut, jamnut and washer from cylinder shaft. Refer to *Figure 17*.
- d. Remove drive access cover at rear of tumble dryer. Refer to *Figure 31*.
- e. Supporting the motor, lift up and run belt off motor pulley. Refer to *Figure 37*.
- f. Pull cylinder out through front of cabinet.
- g. Install cylinder guide tool on cylinder shaft before reinstalling cylinder. Refer to *Figure 20*.

Figure 17

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

28. CYLINDER IDLER

Refer to *Figure 18*.

STACKED TUMBLE DRYER

- a. Remove drive access cover. Refer to *Figure 31*.

- f. Remove four nuts and bolts holding motor and mounting bracket to back of cabinet.
- g. Remove motor assembly.
- h. Remove three bolts and nuts holding idler assembly to cabinet and remove idler assembly.

CAUTION

To reduce the risk of injury, use care when reaching into cabinet through belt service door. The idler pulley could snap into place, causing injury.

W230

- b. Reach into cabinet and carefully apply downward pressure on idler pulley. Slide belt off motor pulley, then slowly release pressure on idler pulley.
- c. Pull cylinder out through front of cabinet.
- d. Remove two screws holding the motor harness conduit cover to connector at motor. Remove conduit cover.
- e. Disconnect harness wires from motor. Turn harness connector out of motor.

Idler Lock Bracket

NOTE: This section pertains only to machines without an idler lock bracket already installed.

- (1) Remove two screws on drive access cover and remove door. Refer to *Figure 31*.
- (2) Reach into cabinet and carefully apply downward pressure on idler pulley. Slide belt off pulleys and slowly release pressure on idler pulley.
- (3) Use 1/4" ratchet with a short extension and 1/2" socket to remove internal top right nut holding the idler mounting bracket to cabinet.
- (4) Slide idler lock bracket over bolt with tab to the left and pointing into the cabinet.
- (5) Replace nut and lock into place.

Figure 18

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

To Re-Install Belt

Refer to *Figure 19*.

- (1) Reach into cabinet through drive access cover and apply downward pressure on idler pulley until idler lever clears idler lock bracket. Insert a screwdriver through hole in bracket.

NOTE: Turn the cylinder clockwise if rotating from the front of the tumble dryer and counterclockwise from the rear.

- (7) Replace drive access cover and guard.
- (8) Connect power to tumble dryer and check for proper operation.

CAUTION

Use extreme care when idler lever is in this position; it is spring loaded. If screwdriver is accidentally removed, serious injury and/or damage to the tumbler could result from idler lever slamming back into position.

W231

NOTE: Use a #3 Phillips screwdriver that is at least 8 inches long.

- (2) Slowly release pressure until idler lever rests on screwdriver shaft.
- (3) Carefully install belt.
- (4) Apply downward pressure on idler lever until it is possible to remove screwdriver.

IMPORTANT: Removing screwdriver without first relieving pressure on the idler lever will cause idler to snap back into place. This could cause injury to the person, the person's hand or damage the tumble dryer.

- (5) Slowly release pressure until idler pulley seats with the belt.
- (6) Rotate cylinder by hand to check that the belt is tracking properly.

Figure 19

STAND ALONE TUMBLE DRYER

- a. Remove control panel. Refer to *Paragraph 18*.
- b. Remove lint panel. Refer to *Paragraph 19*.
- c. Remove front panel. Refer to *Paragraph 16*.
- d. Remove drive access cover. Refer to *Figure 31*.
- e. Lift motor up and run belt off pulley.
- f. Remove cylinder.
- g. Remove four screws holding idler bracket to tumble dryer and remove idler.

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

29. CYLINDER SEALS

Refer to *Figure 20*.

REAR CYLINDER SEAL

- a. Remove cylinder assembly. Refer to *Paragraph 27*.
- b. Remove seal from seal support on rear panel.
- c. Degrease area where new seal is to be placed. Scrape any remaining seal/glue remnants from seal support.
- d. Apply generous amount of glue into seal support.
- e. Carefully install seal into glue surface. Apply pressure until glue is able to support seal and hold it in position.

WARNING

For personal safety use degreaser/solvent only in a well ventilated area away from any open flames or sources of ignition.

W242

FRONT Baffle GASKETS

Refer to *Figure 21*.

- a. Remove lint panel/drawer. Refer to *Paragraph 19*.
- b. Remove control panel and controls. Refer to *Paragraph 18*.
- c. Remove front panel. Refer to *Paragraph 16*.
- d. Remove gasket from baffles.

TMB1754S

Figure 20

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

30. ROLLER SUPPORT AND BAFFLE ASSEMBLY

Refer to *Figure 21*.

- Remove cylinder and bearing assembly. Refer to *Paragraph 27*.
- Remove cylinder seals. Refer to *Paragraph 29*.
- Remove screws holding roller support to cabinet.
- Remove screws holding baffles to heat shields.
- Remove screws holding baffles to center partition.
- Remove baffles.

Figure 21

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

31. AIRFLOW SWITCH

Refer to *Figure 22*.

- Remove fan motor assembly. (Stacked Tumble Dryers only). Refer to *Paragraph 46*.
- Remove two screws on air flow switch guard and remove guard.
- Disconnect wires from switch.

NOTE: Refer to wiring diagram when rewiring switch.

- Remove two screws and one speed nut holding switch to mounting bracket.

Figure 22

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

32. STOVE HIGH LIMIT THERMOSTAT

Refer to *Figure 23*.

- Remove cover screws holding gas valve cover to stove and remove cover.
- Disconnect wires from stove limit thermostat.

NOTE: Refer to wiring diagram when rewiring thermostat.

- Remove screws holding stove limit thermostat to stove.

Figure 23

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

33. COMPLETE GAS VALVE ASSEMBLY

STACKED TUMBLE DRYER

Refer to *Figure 21*.

Upper Tumble Dryer

- Remove screws holding gas valve cover to stove and remove cover. Refer to *Figure 23*.
- Disconnect gas valve wire connections.
- Disconnect gas line going to upper pocket tumble dryer.
- Disconnect gas valve pipe union nut holding gas shut off valve to gas valve nipple.
- Remove screws holding gas valve to gas valve bracket and remove valve.

Lower Tumble Dryer

- Remove screws holding gas valve cover to stove and remove cover. Refer to *Figure 23*.
- Disconnect gas valve wire connections.
- Disconnect gas line at lower pocket gas valve.
- Remove screws holding gas valve to gas valve bracket and remove valve.

IMPORTANT: When reinstalling gas valve, purge air and sediment from gas service line before connecting to tumble dryer. Purge remaining air until odor of gas is detected, then tighten connection. Use pipe compound resistant to action of L.P. gas on all pipe threads.

WARNING

To reduce risk of fire or explosion, check pipe connections for gas leaks with a non-corrosive leak detection fluid. Do not use an open flame to check for gas leaks!

W310

Figure 24

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

STAND ALONE TUMBLE DRYER

Refer to *Figure 25*.

- Remove gas valve cover. Refer to *Figure 23*.
- Disconnect gas valve wire connections.
- Disconnect gas valve pipe union holding gas shut-off valve to gas valve nipple.
- Remove screws holding gas valve to gas valve bracket and remove valve.

IMPORTANT: When reinstalling gas valve, purge air and sediment from gas service line before connecting to tumble dryer. Purge remaining air until odor of gas is detected, then tighten connection. Use pipe compound resistant to action of L.P. gas on all pipe threads.

WARNING

To reduce risk of fire or explosion, check pipe connections for gas leaks with a non-corrosive leak detection fluid. Do not use an open flame to check for gas leaks!

W310

Figure 25

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

34. BURNER TUBE ASSEMBLY

Refer to *Figure 26*.

- Remove complete gas valve assembly. Refer to *Paragraph 33*.
- Remove stove guard screws holding stove guard to bottom of stove and remove guard.
- Remove screws holding burner to stove.
- Remove burner by sliding burner tube away from gas valve end of stove.
- Pull down on gas valve end of burner tube and remove from bottom of stove.

Figure 26

35. VIEWER WINDOW

Refer to *Figure 26*.

- Loosen screw in upper left corner.
- Remove lower screw.
- Turn plate counterclockwise in order to view burner tube and igniter gap.

36. IGNITER ASSEMBLY

- Remove screws holding gas valve cover to stove and remove cover. Refer to *Paragraph 33*.
- Remove two screws holding igniter to stove and remove igniter.

IMPORTANT: When reinstalling igniter to burner, gap should be .110" - .140" (2.79 - 3.55 mm). Refer to *Figure 27*.

Figure 27

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

37. ELECTRONIC IGNITION CONTROL

STACKED TUMBLE DRYER

Refer to *Figure 28*.

- Remove screws holding rear control box cover to control box and remove cover.
- Disconnect wire harness.
- Remove high voltage lead.
- Remove screws holding ignition control to control box and remove ignition control.

Figure 28

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

STAND ALONE TUMBLE DRYER

Refer to *Figure 29*.

- a. Remove screws holding control tray cover to control box and remove cover.
- b. Disconnect wire harness.
- c. Remove high tension lead.
- d. Remove screws holding ignition control to control box and remove ignition control.

Figure 29

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

38. THERMISTOR

STACKED TUMBLE DRYER

Refer to *Figure 30*.

- Remove screws holding guard to blower housing.
- Disconnect wires to thermistor.
- Unscrew thermistor by turning counterclockwise.

NOTE: Do not turn thermistor by spade terminals.

STAND ALONE TUMBLE DRYER

Refer to *Figure 31*.

- Remove screws holding guard to tumble dryer and remove cover.
- Disconnect wires to thermistor.
- Unscrew thermistor by turning counterclockwise.

NOTE: Do not turn thermistor by spade terminals.

IMPORTANT: Do not damage thermistor during removal.

Figure 30

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

39. CABINET THERMOSTAT

STACKED TUMBLE DRYER

Refer to *Figure 30*.

- a. Remove screws holding guard to blower housing.
- b. Disconnect wires to cabinet thermostat.
- c. Remove screws holding thermostat to blower housing and remove cabinet thermostat.

STAND ALONE TUMBLE DRYER

Refer to *Figure 31*.

- a. Remove screws holding guard to tumble dryer and remove guard.
- b. Disconnect wires from cabinet thermostat.
- c. Remove screws holding cabinet thermostat to cabinet and remove cabinet thermostat.

NOTE: Thermistor and cabinet thermostat are located inside cabinet in models after Serial No. 9807017296. Refer to *Figure 31*.

Figure 31

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

40. HEATER ELEMENT

(Electric Models)

Refer to *Figure 32*.

- Remove three screws holding connector cover in place. Remove guard.
- Remove nuts attaching element wires and jumper bars to elements. Disconnect element wires.
- Remove six screws holding element guard to back of heater box. Remove guard.
- Remove element attaching screw holding element to the left side of stove (viewed from rear of tumble dryer).
- Slide element to right and pull left side of element down and out to the left to remove element (viewed from rear of tumble dryer).

TMB1757S

Figure 32

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

41. CONTACTORS AND TERMINAL BLOCK (Electric Models)

Refer to *Figure 33*.

- Remove screws holding cover and remove cover.
- Loosen terminal screws and remove all wires from contactor.

c. Disconnect wires from contactor.

d. Remove four contactor attaching screws and remove contactor.

NOTE: Refer to wiring diagram when rewiring contactor.

Figure 33

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

42. STEAM COIL

Refer to *Figure 34*.

CAUTION

Allow steam coils and valve to cool down before attempting any service procedures.

W249

- Disconnect pipes to steam coils.
- Remove bottom screws holding steam coils to back of tumble dryer cabinet.
- Support steam coils and remove top screws, then remove steam coils.

Figure 34

43. STEAM SOLENOID VALVE

Refer to *Figure 35*.

CAUTION

Allow steam coils and valve to cool down before attempting any service procedures.

W249

- Disconnect pipes.
- Disconnect wires.
- Remove valve by turning valve counterclockwise.

Figure 35

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

44. DRIVE BELT

Refer to *Figure 36*.

STACKED TUMBLE DRYER

- a. Unlock and remove lint drawer. Refer to *Paragraph 19*.
- b. Remove front panel. Refer to *Paragraph 16*.
- c. Remove two screws on drive access cover. Remove door. Refer to *Figure 31*.
- d. Remove palnut, jamnut and washer from cylinder shaft. Refer to *Figure 17*.
- e. Install cylinder guide tool on cylinder shaft. Refer to *Figure 20*.
- f. Remove cylinder.

CAUTION

To reduce the risk of injury, use care when reaching into cabinet through belt service door. The idler pulley could snap into place, causing injury.

W230

- g. Reach into cabinet and carefully apply downward pressure on idler pulley. Slide belt off motor pulley and then slowly release pressure on idler pulley.
- h. Pull cylinder out through front of cabinet. Refer to *Paragraph 27*.

NOTE: Before reassembling cylinder, clean interior of cabinet, checking to make sure all tools have been removed.

INSTALLING BELT

- a. Hang new belt from two screws above rear seal channel and position seal around outside of seal support. Refer to *Figure 20*.
- b. Install cylinder. Refer to *Paragraph 27*, step h.

NOTE: When installing cylinder belt, be sure belt is properly positioned around cylinder and on motor pulley and idler. Rotate cylinder clockwise to align belt around belt path. *Figure 36* shows proper belt position for stacked tumble dryers.

Figure 36

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

STAND ALONE TUMBLE DRYER

Refer to *Figure 37*.

- Unlock and remove lint panel. Refer to *Paragraph 19*.
- Remove front panel. Refer to *Paragraph 16*.
- Remove palnut, jamnut and washer from trunnion shaft. Refer to *Figure 17*.
- Install cylinder guide tool on cylinder shaft. Refer to *Figure 20*.

- Remove drive access cover at rear of tumble dryer. Refer to *Figure 31*.
- Raise motor assembly and run belt off motor pulley.
- Pull cylinder out through front of cabinet. Refer to *Paragraph 27*.

NOTE: Before reassembling cylinder, clean interior of cabinet, checking to make sure all tools have been removed.

Figure 37

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

45. FAN

STACKED TUMBLE DRYER

Refer to *Figure 38*.

- a. Remove airflow switch. Refer to *Paragraph 31*.
- b. Remove guard and harness. Refer to *Figure 7*.
- c. Unscrew thermistor. Refer to *Figure 30*.

NOTE: Do not turn thermistor by spade terminals.

IMPORTANT: Before attempting to service fan, always remove thermistor to prevent damage.

- d. Remove ten screws holding fan motor to tumble dryer.
- e. Tilt fan motor forward until it clears stove.
- f. Lift fan motor out.
- g. Remove jamnut and palnut holding fan to motor shaft. Refer to *Figure 40*.

Figure 38

STAND ALONE TUMBLE DRYER

Refer to *Figure 39*.

- a. Unscrew thermistor.
- b. Remove four nuts and six screws holding fan to rear of tumble dryer.
- c. Tip fan up from bottom to remove.
- d. Remove jamnut and palnut holding fan to motor shaft. Refer to *Figure 41*.
- e. Slide fan off shaft.

NOTE: Before attempting to service fan, always remove thermistor to prevent damage.

Figure 39

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

46. FAN MOTOR ASSEMBLY

STACKED TUMBLE DRYER

Refer to *Figure 40*.

- Remove cabinet limit cover and harness. Refer to *Figure 30*.
- Unscrew thermistor.

NOTE: Do not turn thermistor by spade terminals.

IMPORTANT: Before attempting to service fan, always remove thermistor to prevent damage.

- Disconnect wire harness to fan motor.
- Remove ten screws holding fan motor assembly to blower housing. Refer to *Figure 38*.
- Tilt fan motor forward until it clears stove.
- Remove palnut and jamnut holding fan to motor shaft and remove fan from motor shaft.
- Remove four bolts holding fan motor to mounting plate and remove motor.

Figure 40

	<h2 style="margin: 0;">WARNING</h2>
<p>To reduce the risk of electric shock, fire, explosion, serious injury or death:</p> <ul style="list-style-type: none"> • Disconnect electric power to the tumbler before servicing. • Close gas shut-off valve to gas tumbler before servicing. • Close steam valve to steam tumbler before servicing. • Never start the tumbler with any guards/panels removed. • Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded. 	
<small>W002</small>	

STAND ALONE TUMBLE DRYER

Refer to *Figure 41*.

- a. Remove sensor guard from fan motor mounting plate.

IMPORTANT: Before attempting to service fan, always remove thermistor to prevent damage.

- b. Remove six screws and four nuts holding fan motor mounting plate to cabinet.
- c. Remove palnut and jamnut from motor shaft and remove fan from motor shaft.
- d. Remove bolts holding mounting plate to motor and remove motor.

Figure 41

47. DRIVE MOTOR

STACKED TUMBLE DRYER

Refer to *Figure 42*.

- a. Remove two screws attaching drive access cover to cabinet. Remove door. Refer to *Figure 31*.
- b. Reach into cabinet and carefully apply downward pressure on idler pulley. Slide belt off pulley and slowly release pressure on idler pulley. Refer to *Figure 36*.

	<h2 style="margin: 0;">CAUTION</h2>
<p>To reduce the risk of injury, use care when reaching into cabinet through belt service door. The idler pulley could snap into place, causing injury.</p>	
<small>W230</small>	

- c. Remove two screws holding the motor harness conduit cover to connector at motor. Remove conduit cover.
- d. Disconnect two harness wires from motor and pull wires out. Turn harness connector out of motor.
- e. Remove four nuts holding motor and motor mount to back of cabinet. Refer to *Figure 42*.
- f. Remove motor assembly.

Figure 42

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

STAND ALONE TUMBLE DRYER

Refer to *Figure 43*.

- a. Remove two screws holding drive access cover in place. Remove door. Refer to *Figure 31*.
- b. Lift motor up.
- c. Reach into cabinet and disconnect belt by rolling off pulley.
- d. Unscrew bolt at end of shaft.
- e. While supporting motor, remove four bolts on top of motor.
- f. Disconnect spring.
- g. Remove motor.

Figure 43

Notes

[illegible]

Section 6

Adjustments

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

48. LEVELING LEGS

NOTE: Keep the tumble dryer as close to the floor as possible. All legs must rest firmly on the floor so weight of tumble dryer is evenly distributed. Tumble dryer must not rock.

- a. Check front to rear level by rotating clothes cylinder until one of the cylinder ribs is at the bottom. Place a level on the rib. Adjust legs as necessary.

NOTE: The front of the tumble dryer should be slightly higher than the rear (approximately 1/8 inch, 3.18 mm). This will prevent the clothes, while tumbling, from wearing on the door glass gasket.

- b. Check side to side level by placing a level on front and rear of top panel. Adjust legs as necessary.

IMPORTANT: Do not remove plastic caps covering leveling legs in lint compartment.

WARNING

The stacked drying tumbler has a 5th leveling leg on the blower housing. It is very important to properly adjust this leg. Unit is back heavy and could rock or tip.

W250

STACKED TUMBLE DRYER ONLY

Refer to *Figure 44*.

- a. Level four main legs and then run fifth leg to floor and secure.

Figure 44

49. AIRFLOW SWITCH ADJUSTMENT

The airflow switch is set at the factory for proper operation. No adjustment necessary.

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

50. CYLINDER DOOR SWITCH

The door switch should be adjusted so the cylinder stops when door is opened 2 inches (51 mm), plus or minus 1/4 inch (6 mm). The switch is normally open and is closed when the door is closed. If adjustment is needed, proceed as follows:

- Close door and start tumble dryer. Slowly open loading door. Cylinder and heat system should shut off when door is open 2 inches (51 mm), plus or minus 1/4 inch (6 mm).
- Slowly close loading door. When door is 2 inches or less from being fully closed, the switch actuator on the door should contact the switch plunger and depress it enough to close the switch with an audible “click”.

If tab does not depress the switch plunger enough to operate the switch, bend tab on loading door OUTWARD and repeat steps “a” and “b.”

EU MODELS

European tumble dryers have a second door switch near the top of the door. Refer to *Figure 45*. This switch also should be adjusted so the cylinder stops when door is opened 2 inches (51 mm), plus or minus 1/4 inch (6 mm). This switch is normally closed and is opened by the hinge cam when the door is opened. If adjustment is needed, proceed as follows:

- Remove lower switch actuator so upper switch click can be heard.
- Loosen upper door switch screws just enough so switch can be moved left or right. Move switch right if door opens too far before switch clicks. Move switch left if door doesn’t open far enough before switch clicks.
- Retighten door switch screws and retest. Repeat step “b” if further adjustment is needed.
- Reinstall lower switch actuator.

Figure 45

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

51. CYLINDER DOOR STRIKE

(Refer to *Figure 46*)

The door strike must be adjusted so that sufficient tension holds loading door closed against the force of a load tumbling against it. The door is properly adjusted when 8-15 lbs. (3.60-6.75 kg) of pull is required to open door.

To adjust, open door, loosen jamnut and turn door strike screw in or out as required. Retighten jamnut.

Figure 46

Section 6 Adjustments

52. TROUBLESHOOTING AND CLEANING COIN DROP

When a coin is placed into coin slot, the coin should roll down drop and be heard dropping into coin vault. If coin does not fall into coin vault or if coin drop sensor does not register that coin has been entered, follow troubleshooting instructions below.

53. TROUBLESHOOTING COIN DROP

Is proper electrical power supplied to coin drop? Incorrect electrical connection may prevent coins from registering in coin drop. Refer to wiring diagram and service manual for proper connections.

Is machine level? Machines that are not level may prevent coins from following through required check stages of drop. Refer to Installation Instructions for instructions on leveling machine.

Is coin drop clean? Residue or lint build-up may prevent coins from following through required check stages of drop. Refer to ***Cleaning Coin Drop*** instructions below.

IMPORTANT: Never use oil to correct coin drop problems. Oil residue will prevent coins from rolling properly.

IMPORTANT: Do not bend or damage mechanical parts within coin drop.

54. CLEANING COIN DROP

The electronic coin drop should be cleaned once a year. Clean the drop more often if it is exposed to high levels of residue or lint build-up. Follow the instructions below for cleaning the coin drop.

1. Disconnect electrical power to machine and drop.
2. Remove coin drop from machine.
3. Open cover of coin drop. Refer to instructions for your coin drop below.

Coin Drops with Old-Style Spring (Refer to Figure 47.)

Figure 47

- a. Move spring downward until cover catch is free. Refer to Figure 48.

NOTE: Do not lift or overbend the spring in any direction.

Figure 48

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

- b. Open cover for coin drop. Refer to *Figure 49*.

Figure 49

Coin Drops with New-Style Spring (Refer to Figure 50.)

Figure 50

- c. Open cover of coin drop. Refer to *Figure 51*.

NOTE: Do not overbend the spring by opening cover too far.

Figure 51

WARNING

To reduce the risk of electric shock, fire, explosion, serious injury or death:

- Disconnect electric power to the tumbler before servicing.
- Close gas shut-off valve to gas tumbler before servicing.
- Close steam valve to steam tumbler before servicing.
- Never start the tumbler with any guards/panels removed.
- Whenever ground wires are removed during servicing, these ground wires must be reconnected to ensure that the tumbler is properly grounded.

W002

4. Clean the coin path with a soft brush and wipe exposed surfaces with an alcohol moistened cloth. Refer to *Figure 52* and *Figure 53*.

Figure 52

Figure 53

5. Clean residue from coin rail with an alcohol moistened cloth. Refer to *Figure 54*.

Figure 54

6. Clean light sensors with a soft brush or air spray duster. Refer to *Figure 55*.

Figure 55

7. Close cover for coin drop.
8. **Coin Drops with OLD-Style Spring** – Move spring back over cover catch.
9. Reinstall coin drop into machine.
10. Reconnect electrical power to machine and drop.
11. Add a coin to drop to verify that coin drop is operating properly and that electrical connection is working properly.
