SAFETY AND WARNINGS SIGNS

Replace If Missing Or Illegible

One or more of these signs must be affixed on each machine as indicated, when not included as part of the front instruction panel.

LOCATED ON THE OPERATING INSTRUCTION SIGN OF THE MACHINE:

CAUTION

1. Do not open washer door until cycle is completed, operating light is off, and wash cylinder has stopped rotating.
2. Do not tamper with the door safety switch or door lock.
3. Do not attempt to open door or place hands into washer to remove or add clothes during operation. This can cause serious injury.

PRECAUCION

1. No abra la puerta de la máquina lavadora sino hasta que la máquina haya terminado su ciclo, la luz operativa esté apagada y el cilindro de lavado haya completamente terminado de girar.
2. No interfiera o manipule el switch o la cerradura de la puerta.
3. No trate de abrir la puerta o meta las manos dentro de la máquina para meter o sacar ropa mientras la máquina está en operación, pues puede resultar seriamente herido.

MACHINE SHOULD NOT BE USED BY CHILDREN

LAS MÁQUINAS NO DEBEN SER USADAS POR NIÑOS

LOCATED AT THE REAR OF THE MACHINE:

INSTALLATION AND MAINTENANCE WARNINGS

1. This machine **MUST** be securely bolted according to the installation instruction to reduce the risk of fire and to prevent serious injury, or damage to the machine.
Pour reduire les risques d'incendie, fixer cet appareil sur un plancher beton sans revetement.
2. If installed on a floor of combustible material, the floor area below this machine must be covered by a metal sheet extending to the outer edges of the machine.
3. This machine **MUST** be connected to a dedicated electrical circuit to which no other lightning unit or general purpose receptacle is connected. Use copper conductor only.
Utiliser seulement des conducteurs en cuivre.
4. This machine **MUST** be serviced and operated in compliance with manufacturer's instructions. **CHECK DOOR LOCKS EVERY DAY FOR PROPER OPERATION TO PREVENT INJURY OR DAMAGE. IF THE DOOR LOCK FAILS TO OPERATE PROPERLY, PLACE THE MACHINE OUT OF ORDER UNTIL THE PROBLEM IS CORRECTED.**
5. Disconnect power prior to servicing of machine.
Deconnecter cet appareil del'alimentation avant de proceder a l'entretien.
6. To remove top panel, first remove screws at the rear. When remounting the top, reinstall them. To remove the top panel on models on which it is secured by one or two keylocks, use the keys originally shipped in the drum package. Be certain to relock after remounting the top panel.

MANUFACTURED BY WASCATOR
DISTRIBUTED BY WASCOMAT INWOOD, NEW YORK, USA

471 7662-02

LOCATED ON THE DOOR:

If you need to order more safety or warning signs, call Wascomat's parts department at 516-371-2000, or call your local dealer.

WARNING !

DO NOT ATTEMPT TO OPEN DOOR
UNTIL PROGRAM HAS FINISHED AND
DRUM HAS STOPPED ROTATING.

471 7651-17

NOTICE TO: OWNERS, OPERATORS AND DEALERS OF WASCOMAT MACHINES

IMPROPER INSTALLATION AND INADEQUATE MAINTENANCE, POOR HOUSEKEEPING AND WILLFUL NEGLECT OR BYPASSING OF SAFETY DEVICES MAY RESULT IN SERIOUS ACCIDENTS OR INJURY. TO ASSURE THE SAFETY OF CUSTOMERS AND/OR OPERATORS OF YOUR MACHINE, THE FOLLOWING MAINTENANCE CHECKS MUST BE PERFORMED ON A DAILY BASIS.

1. Prior to operation of the machine, check to make certain that all operating instructions and warning signs are affixed to the machine and legible. (See the following page of this manual for description and location of the signs.) Missing or illegible ones must be replaced immediately. Be sure you have spare signs and labels available at all times. These can be obtained from your dealer or Wascomat.
2. Check the door safety interlock, as follows:
 - (a) OPEN THE DOOR of the machine and attempt to start in the normal manner:

For CLARUS microprocessor models, choose a program and press the START button.

THE MACHINE(S) MUST NOT START !

- (b) CLOSE THE DOOR to start machine operation and, while it is operating, attempt to open the door without exerting extreme force on the door handle. The door should remain locked!

If the machine can start with the door open, or can continue to operate with the door unlocked, the door interlock is no longer operating properly. The machine must be placed out of order and the interlock immediately repaired or replaced. (See the door interlock section of the manual.)
3. DO NOT UNDER ANY CIRCUMSTANCES ATTEMPT TO BYPASS OR REWIRE ANY OF THE MACHINE'S SAFETY DEVICES, AS THIS CAN RESULT IN SERIOUS ACCIDENTS.
4. **Be sure to keep the machine(s) in proper working order:** Follow **all** maintenance and safety procedures. Further information regarding machine safety, service and parts can be obtained from your dealer or from Wascomat through its Technical Support Department - 516/371-0700.

All requests for assistance must include the model, serial number and electrical characteristics as they appear on the machine identification plate. Insert this information in the space provided on the previous page of this manual.

5. **WARNING:** DO NOT OPERATE MACHINE(S) WITH SAFETY DEVICES BYPASSED, REWIRED OR INOPERATIVE! DO NOT OPEN MACHINE DOOR UNTIL DRUM HAS STOPPED ROTATING!

Intentionally blank

Safety

Safety

**This machine can only be used with water.
Never use dry cleaning agents.**

Do not allow children to operate the machine.

Do not hose down or spray the machine with water.

**All mechanical and electrical installation must be carried out by
qualified personnel.**

Do not bypass the door locking device.

**Should the machine malfunction, please report the fault to the
technician responsible for the machine.**

Emergency stop

If the machine for some reason has
to be stopped – press emergency
stop button

When necessary measures have
been taken, the emergency button
can be reset by pulling it out.

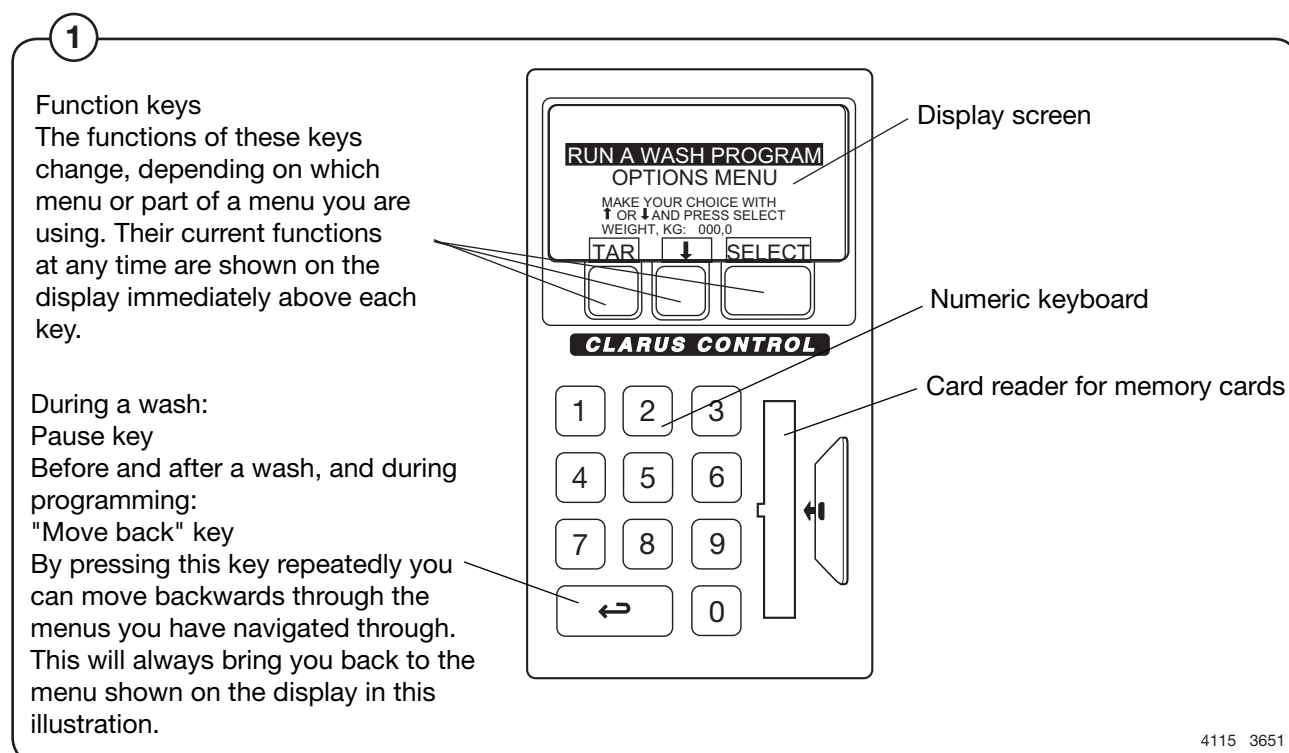

**All external equipment which is connected to the machine must be
CE/EMC-approved and connected using an approved shielded cable.**

The manufacturer reserves the right to make changes to design and component specifications.

General description

- ① This washer extractor is controlled by a microprocessor-based program control unit. There are many advantages to this equipment, including:
 - timing, levels and temperatures are controlled with great precision and flexibility
 - the large display screen means that detailed information on wash programs, machine status and operations, wash times and temperatures can be accessed in plain language
 - it is possible for the user to create new wash programs, and to adapt programs with great precision, on the basis of experience and to suit various types of textile, degrees of soiling etc.
 - a very high level of machine safety through continuous monitoring and built-in safety interlocks
 - the program control unit has a reader for "smart cards". These are cards the size of a credit card which contain a memory chip. Smart cards allow the user to:
 - transfer wash programs between a PC and the washer extractor, or from one washer extractor to another
 - run programs straight from a card
 - great flexibility during program operation:
 - rapid advance both forwards and backwards in the program
 - the user can change temperatures, program module lengths and extraction speeds directly, during program operation
 - change to running a different wash program, at any time during program operation of the washer extractor.

Automatic operation

Preparations

- Open the machine door and check that the drum is empty.
- Load the laundry items into the drum and close the door.
- Check that the emergency stop button has not been pressed inwards (see "Machine safety").
- Close the machine door. The machine is now ready to begin washing.

Add detergent and other laundry products

- ② If you are using the machine's built-in detergent dispensers, add the required detergent and other laundry products.

Warning!

**Take care when adding laundry products.
Powder or liquids left in the compartments
(scoops) may be corrosive.**

To run a wash program

Preparations

- Sort the load, paying attention to the textile care labels on the items. Empty all pockets and do up zip fasteners.
- Open the machine door, check that the drum is empty, load the items into the machine and close the door.
- Check that the emergency stop button has not been pressed inwards (see "Machine safety").

The "Move back" key

3627

If you find you are in the wrong place, or if you want to undo earlier key presses:

Press the "Move back" key one or more times.

The "Move back" function

Each press of the "Move back" key moves you back one menu, in reverse order. By pressing this key repeatedly you can return to this menu at any time:

To start the wash program

3580

If this menu is not currently displayed:

Press  repeatedly.

RUN A WASH PROGRAM
OPTIONS MENU

If "GO TO THE MENU" is highlighted:

Press .

RUN A WASH PROGRAM
OPTIONS MENU

When "RUN A WASH PROGRAM" is highlighted:

SELECT

Press **SELECT**.

Two ways of starting a program

By entering the actual program number

Enter the actual program number if you know it, then press **SELECT**.

By starting from the program library (see section "To start a wash program from the program library")

If you are unsure about the programs available, you can select a program from the program library, where the programs are listed with their descriptions.

Machine operation

RUN A WASH PROGRAM
ENTER A PROGRAM NUMBER:

101

SELECT FROM LIBRARY

CLS SMC 993

3581 A

Here you can select programs from the program libraries. See the section entitled "To start a wash program from the program library".

Displayed here will be the number of the most frequently used program. S993 would indicate the number of a program on a memory card.

Press this key if you want to select this program.

for example: 991

SELECT

Use the numeric keys to enter the program number
Press SELECT.

If you have entered the wrong number

Enter the correct number to overstrike the earlier one.

Note: you must always enter three digits, even when the number is really only a one or two-digit number.

Examples:

The program number required is 9. Enter 009 to overstrike all digits in the wrong number.

The program number required is 19. Enter 019 to overstrike all digits in the wrong number.

RUN A WASH PROGRAM
ENTER A PROGRAM NUMBER:

101

FROM CLS OR SMC?

CLS SMC OK

4031 A

If you have a memory card in the program control unit, and the program you selected is both on the memory card and in the PCU, you will be asked "FROM CLS OR SMC?".

CLS

Press CLS if you want to take the program from the PCU.

SMC

Press SMC if you want to take the program from the memory card.

In some of the text shown on the display, Clarus Control is referred to as CLS and the memory card is referred to as SMC.

Memory cards

A memory card is a plastic card, the size of a credit card, with an electronic memory chip inside it. This card is capable of storing 10 to 15 wash programs of normal size. If the programs are mostly small ones, more of them can be stored, whereas larger programs will reduce the number which can be held by the card. Memory cards of this type can be used to:

- transfer wash programs from one washer extractor to another
- run wash programs straight from the card
- transfer wash programs from a PC to a memory card and from a memory card to a PC (these procedures, and how to write a wash program on a PC, are described elsewhere).

Memory cards are described in detail in the section entitled "The Memory card".

3582

Delayed start time (hrs:
mins)
Program name

If you want to see the de-
scription of the program:

Press **TEXT**.

Pressing "Text" displays more information

The text displayed is a description of the wash program selected. This text description is inserted when a new wash program is created. This procedure is described fully in the programming manual.

①

Choose 1 or 2:

1 To start the program now:

Press **START**.

②

2 **Delayed start**

Use the numeric keys to enter a time (max. 99 hrs). This parameter appears on the right of the display.

Press **START**.

Delayed start

Delayed start means that the machine will not start the wash program until the time entered has elapsed.

This function allows you, for example, to load the machine in the evening, but delay the start of the wash until early the next morning, to end in time for the next shift.

Time left before the
machine is to start

If you want to cancel the
delayed start:

Press **EXIT**

3627

During a wash program:

Press **↔** to
make the machine pause
during the wash program.

Two ways of pausing during a wash program

There are two ways of pausing during a wash program:

1 By pressing **↔**.

2 As an additional function. This is described in **section "Pause"**.

Machine operation

Please note!

On this machine the drum speed will not be displayed during a wash, although the illustration below includes this menu line. This function is available only on machines with a frequency-controlled motor.

To terminate a program before it has finished

- Select RAPID ADVANCE and press SELECT. Advance to "END OF PROGRAM" and press SELECT.
- Wait until "THE DOOR IS OPEN" appears on the display.
- Now the door can be opened.

To change parameters in the current program step

See section "To change parameters in the current program step".

Certain program step parameters can be altered during the course of the program. In the example (left), the length of the program step and the heating temperature can be altered.

Function not allowed

In Settings 1 you can determine whether the use of these functions will be allowed. If you have entered "N" alongside any of these functions in Settings 1, the text FUNCTION NOT ALLOWED will be displayed.

SHOW WEIGHT
RAPID ADVANCE
 PAUSE
 MANUAL FUNCTIONS
 TEXT
 SELECT NEW WASH PROGRAM
 CHANGE °F/°C
 AUTO RESTARTS

If required:

Select a **function** using the cursor keys.

Press SELECT.

Additional functions during the program

Rapid advance (see section "To change parameters in the current program step")

Rapid advance through the program to the program step required. Rapid advance can be used to move both forwards and backwards through the program.

Display weight (see section "Display weight")

The actual load weight is shown in large digits on the display (weight display mode). (On machines with weighing equipment only.)

No water level reduction (see section "No water level reduction")

Machines with weighing equipment installed adjust the water level automatically according to the load weight. This function lets you switch off water level reduction during the current program.

Pause (see section "Pause")

The machine stops. The drain valve remains closed. Another way to pause the program: Press .

Manual functions (see section "Manual operation during a program")

The following functions can be controlled manually during the course of the program:

- all water valves, drain and pumps (where applicable).
- limit highest extraction speed.
- motor on/off after end of wash program.
- flush detergent.

Text (see section "Text")

Display description of wash program (if available).

Select a different wash program (see section "To change the wash program after program operation has commenced")

You can switch to using a different wash program at any stage during the wash. Once this function has been selected, the current step (for example, rinse) of the earlier program will be allowed to finish and then the new program will start (from the beginning).

Change temperature scale °C or °F (see section "To change temperature scale °C/°F")

Auto restart (see section "Auto restart")

Here you enter the number of times you wish the wash program to restart automatically.

To start a wash program from the program library

What is the program library?

The program library lists all wash programs, both user and standard programs, showing their program numbers and a description, for example:

1	MY OWN 40 °C
2	MY OWN 60 °C
3	MY OWN 90 °C
991	NORMAL 95°C STD
992	NORMAL 60°C STD
993	NORMAL 40°C STD
994	INTENSIVE 95°C
995	INTENSIVE 60°C
996	PERM. PRESS 60°C
997	PERM. PRESS 40°C
998	LOW EXTRACT 1 MIN
999	HIGH EXTRACT 5 MIN

Each time a new program is stored in the machine program memory, its number and description will be inserted automatically into the program library.

The program library may be used for starting a wash program, but is also used in programming, when a wash program needs to be modified or if a new program is to be created on the basis of an existing one.

RUN A WASH PROGRAM

ENTER A PROGRAM NUMBER:

101

FROM CLS OR SMC?

CLS

EXIT

Time (in hours and minutes) left before the machine is to start.

Of if you want to cancel the delayed start:

Press **EXIT**.

The functions which are available during program operation are described in sections "To change parameters in the current program step - Auto restart".

To change parameters in the current program step

3584

During program operation the display will look like this (see section "To start the wash program").

You can alter the following program steps:
Prewash, Main wash, Rinse, Drain, Soak
Length of program step (max. 9998 seconds), heating temperature (max. 97°C).
Extraction
Length of program step (max. 3600 seconds), extraction speed.

Press  one or more times...

...to highlight the line required.

Press SELECT.

Use the numeric keys to enter the new parameter .

Press SELECT.

If you have entered the wrong parameter
Continue pressing numeric keys to overstrike the incorrect parameter.
Note: always use the same number of digits as used on the display to overstrike the incorrect parameter.
Example:
To change the time for the program step to **30** seconds, enter **030** to overstrike the earlier parameter.

Rapid advance

During program operation the display will look like this (see section "To start the wash program").

Check that "RAPID ADVANCE" is highlighted.

If it is not highlighted:

Press or one or more times to highlight "RAPID ADVANCE".

Press SELECT.

To terminate a program before it has finished

- Select RAPID ADVANCE and press SELECT. Advance to "END OF PROGRAM" and press SELECT.
- Wait until "THE DOOR IS UNLOCKED" appears on the display.
- Now the door can be opened.

Two types of manual operation

There are two types of manual operation, which should not be confused:

- **Manual operation during a program**
These functions are described in this section.
- **Manual operation when no program is running**

These functions are described in **section "Manual operation"**.

Press or one or more times to highlight "MANUAL FUNCTIONS".

Press SELECT.

3679

Use the cursor keys to
select the function.

Press SELECT.

Automatic return to normal display

Once you have selected any of the functions below, you must make any changes required within 20 seconds. If no further keys are pressed within 20 seconds, the display will revert automatically to its normal appearance during a wash program.

Manual functions during a wash program

Water/drain (see section "Water/drain")

Allows manual operation of all water valves and the drain valve.

Highest extraction speed (see section "Maximum extraction speed")

Note: this function is available only on machines with a frequency-controlled motor.

Here you can limit the maximum extraction speed for the current program.

Motor (see section "Motor on after wash")

Motor on/off after program has ended.

Detergent valves (see section "Detergent signals and water flushing")

Allows you to control all valves in the detergent compartment or in external detergent supply system.

Water/drain

To access this function, see instructions in section "Manual operation".

Water level in drum

Use ↓ and ↑ to select the water/drain option you require.

Press OPEN.
The function will be activated for as long as you press and hold this key. The function ceases as soon as you release the key.

When you have finished:
Press ↓ repeatedly to highlight "EXIT".

Press SELECT.

Maximum extraction speed

MANUAL FUNCTIONS
HIGH EXTRACT
CURRENT MAXIMUM EXTRACT SPEED: 1000 RPM
SELECT NEW EXTRACT SPEED:
1000 RPM

3681

To access this function, see instructions in section "Manual operation".

Maximum extraction speed in current program.

1 2 3

4 5 6

7 8 9

0

Enter the maximum extraction speed you require for this program.

SELECT

Press SELECT.

Please note!

This function is available only on machines with a frequency-controlled motor.

To limit the program's highest extraction speed

This function allows you to modify the highest extraction speed allowed during the program.

Example:

Assume that the highest speed in the program is 1000 rpm and that you have set 700 rpm as the highest speed allowed.

This change will affect the current program only. No change will be implemented if extraction is taking place at the time of the (attempted) change. The next time that this program is used, the original maximum speed will apply.

This function does not allow you to set a **higher** speed than the usual maximum speed for the program.

Motor on after wash

To access this function, see instructions in section "Manual mode".

A toggle function:

Use Y/N to toggle the function from ON (Yes) to OFF (No).

When you have finished:
Press  to highlight "EXIT".

Press SELECT.

Motor to rotate after program has ended

If you answer **Yes (Y)**:

The motor will continue to rotate in alternative directions after the program has ended. This prevents creasing of the load.

When the program has ended, the display will look like this:

Press STOP to stop the motor.

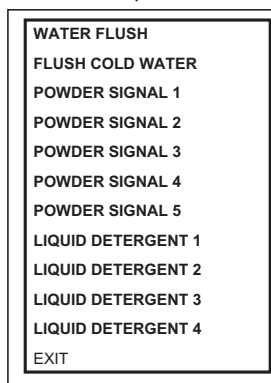

Detergent signals and water flushing

To access this function, see instructions in section "Manual mode".

Use **DOWN** and **UP** to select the function you require.

Detergent signals and water flushing

FLUSH WATER:

This function uses water to clear detergent from the supply tubes of the detergent dispensing system.

POWDER SIGNAL:

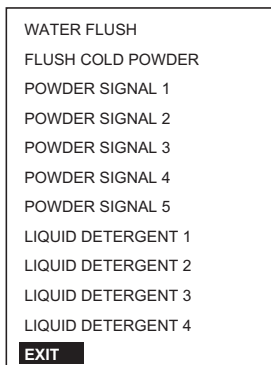

This function will either: a) use water to dispense detergent from machine compartments, or: b) dispense detergent from an external system. The number of valves present will vary according to the machine type.

**Press OPEN.**

The function will be activated for as long as you press and hold this key. The function ceases as soon as you release the key.

When you have finished:

Press **DOWN repeatedly to highlight "EXIT".**

Press SELECT.

Press SELECT.

Two types of manual operation

There are two types of manual operation, which should not be confused:

- **Manual operation when no program is running**

These functions are described in this section.

- **Manual operation during a program**

These functions are described in **section "Manual operation"**.

Always lock the door first!

You must always close and lock the door first before you can operate the machine manually.

To lock the door, use the submenu MOTOR/DOOR, see **section "Motor/door"**.

All manual settings are cancelled when you exit manual operation

All manual settings (such as door, motor, temperature, and drain) will be cancelled when you exit manual operation.

The door is unlocked, the motor stops, the drain opens, heating is halted, and the temperature is reset to zero.

Press SELECT.

Lock the door and start the motor

DOOR LOCK ON

If you answer **Yes (Y)**:

The door will be locked. Note that you must always lock the door before you can operate the machine manually.

MOTOR ON

If you answer **Yes (Y)**:

The motor will start and operate, using normal action.

Water/drain

3688

To access this function, see instructions in section "To select manual operation".

Use or to select Drain or one of the six Water filling alternatives.

Drain (a toggle function) :
Press Y/N to toggle the function from Yes (Y) and No (N).

Water filling:
Press OPEN.
The function will be activated for as long as you press and hold this key. The function ceases as soon as you release the key.

When you have finished:
Press to highlight "EXIT".

Press SELECT.

Heating

3689

To access this function, see instructions in section "To select manual operation".

Temperature selected
Actual temperature

Please note!

The drum must have filled to above the safety level before manual heating can take place.

Use the numeric keys to enter the temperature the water is to be heated to.

Press START.
Heating will now begin.

If you wish, you can cancel heating before the set temperature is reached:

Access this function again and press STOP.

Detergent signals and water flushing

3684

To access this function, see instructions in section "To select manual operation".

Use and to select the function you require.

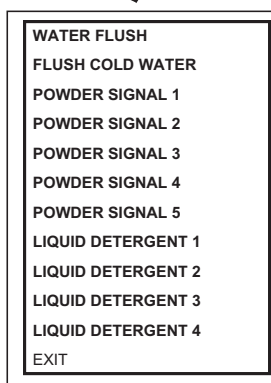

Detergent signals and water flushing

FLUSH WATER:

This function uses water to clear detergent from the supply tubes of the detergent dispensing system.

POWDER SIGNAL:

This function will either: a) use water to dispense detergent from machine compartments, or: b) dispense detergent from an external system. The number of valves present will vary according to the machine type.

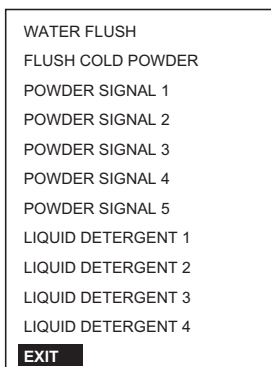

Press OPEN.

The function will be activated for as long as you press and hold this key. The function ceases as soon as you release the key.

When you have finished:

Press repeatedly to highlight "EXIT".

Press SELECT.

At the end of the wash

Machines without tilt function:

Open the machine door and remove the washed load.

Machines with tilt function forward:

- ③ • Turn the uppermost switch on the tilt control unit clockwise. The machine will now tilt forward.
- ④ • Use the bottom switch on the tilt control unit to rotate the drum, either to the right or the left. This makes it easier to empty the drum.
- ⑤ • Press the middle switch on the tilt control unit. The machine will now return to its normal position.

EXIT

If a memory card is in place in the PCU, the memory card program statistics will be displayed. An "S" before the program number shows that it is a memory card program.

When you want to cancel the display of statistics:

Press EXIT.

The Statistics function

The Statistics function gives you access to the following information:

TOTAL RUN TIME HOURS:

Shows the total operating time for the machine since it was installed.

TOTAL TRIP RUN TIME HOURS:

This register records the total number of operating hours since it was last reset. It can, for example, be used to keep track of operating time since the last machine service. The procedure for resetting it is described in **section "To reset "Total trip run time hours" to zero"**.

HOURS SINCE LAST SERVICE

This register shows the time elapsed since the last service. The register can also be used to generate a signal on the display to show when service is needed (see the section "Settings 1" in the service manual).

LAST 5 ERROR CODES:

This displays the most recent error codes, and tells which program was operating at the time and during which hour (according to the "total run time" record) the error code was flagged.

NO. OF TIMES EACH PROGRAM USED:

Displays statistics for PCU programs and for programs on any memory card currently in place in the PCU.

Resetting statistic registers

3589

If this menu is not currently displayed:

Press **SELECT**.

Scale adjustments

The following functions are accessed via the **SCALE ADJUSTMENTS** menu:

Reset scale to zero (see section "Reset scale to zero")

Used to make the weighing equipment display 0 when the machine has no load in it.

Reset tare to zero (see section "Reset tare to zero")

Used to clear a stored tare parameter.

Tare scale (see section "Tare scale")

Used to set the weighing equipment to disregard a given weight, such as the weight of water left in the machine (so it will not be included in the net weight of the load).

Set tare to a certain value (see section "Set tare to a certain value")

Used to enter a value for the tare parameter, a weight in hectograms.

Read tare value (see section "Read tare value")

Used to check the value currently stored as the tare parameter.

Calibrate the scale (see section "Calibrate the scale")

This function is used only on installation of a new scale unit.

Zero calibration (see section "Zero calibration")

Used to increase the accuracy of the weighing equipment.

Read version number (see section "Read version number")

This is where you find the version number of the weighing equipment.

If the weighing equipment is not connected, the error message "WEIGHING EQUIPMENT NOT CONNECTED" will be displayed. Connect the weighing equipment and try again. If necessary, see the section "Fault-finding, weighing equipment" in the machine manual.

Memory card

General introduction

A memory card is a plastic card, the size of a credit card, with an electronic memory chip inside it. This memory card is capable of storing 10 to 15 wash programs of normal size. If the programs are mostly small ones, more of them can be stored, whereas larger programs will reduce the number which can be held by the memory card. Memory cards of this type can be used to:

- transfer wash programs from one machine to another
- run wash programs straight from the memory card
- transfer wash programs from a PC to a memory card and from a memory card to a PC (these procedures, and how to write a wash program on a PC, are described elsewhere)

A program stored on a memory card may be given restricted-use status. This means that:

- The program cannot be deleted or copied to the program control unit of a washer extractor.
- You cannot alter the program or inspect the way it is written.
- To run the program you have to have the memory card and to insert it into the program control unit when the program is to be started.

To select the "Memory card" function

Turn the memory card so its memory chip is at the far end, and on the left of the card...

...then insert the memory card into the program control unit.

If this menu is not currently displayed:
Press repeatedly.

Press to highlight "GO TO THE MENU".

Press SELECT.

Press  three times...

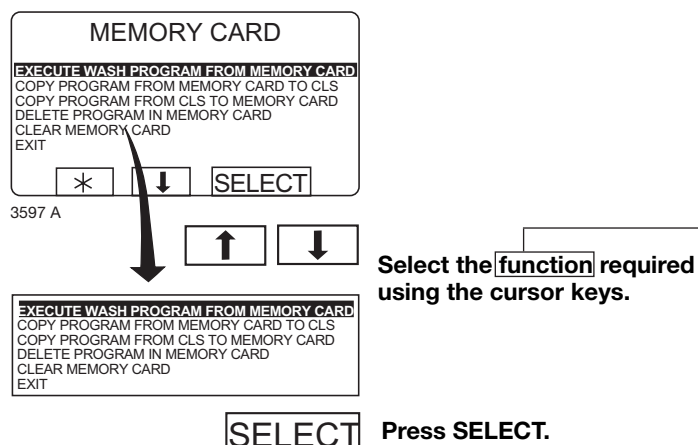

...to highlight "MEMORY CARD".

SELECT

Press **SELECT**.

"The "Memory card" functions

Run wash program straight from memory card (see section "To run a wash program straight from a memory card")

A wash program can be run from the memory card, without first being copied to the washer extractor. The memory card may be removed from the card reader after the program has started.

Programs on memory cards may have "restricted-use" status, which means that they can only be run straight from the memory card, not copied or modified.

Copy program from memory card to PCS (see section "To copy a program from a memory card to the machine's program control unit")

One or more wash programs can be copied from the memory card to the memory chip in the machine's program control unit. Note that programs on the memory card with "restricted-use" status cannot be copied to the machine memory chip.

Copy program from PCS to memory card (see section "To copy a program from the program control unit to a memory card")

One or more wash programs can be copied from the memory chip in the machine's program control unit to the memory card. The memory card can hold 10 to 15 wash programs of normal size.

Delete program on memory card (see section "To delete a program on a memory card")

Clear memory card (see section "To delete all programs on a memory card")

Once the program has started, the memory card may be removed from the card reader.

To run a program from the memory card

In broad terms, the program control unit has two different memories. One is a "program memory" where all its wash programs are stored, the other is an "operating memory", which is used to hold the program currently in use. The program control unit takes the instructions it needs to run the program from the operating memory.

When a wash program is started, the correct program is retrieved from the program memory and copied into the operating memory.

To copy a program from a memory card to the machine's program control unit

To access this menu, follow the instructions in section "To select the "Memory card" function".

Note that restricted-use programs on a memory card cannot be copied.

Highlight "COPY PROGRAM FROM MEMORY CARD TO CLS" (press or if necessary).

Press **SELECT**.

If necessary, use to...

... highlight the wash program required.

Press **SELECT**.

What is a restricted-use program?

A wash program which has been created on a PC can be made a "restricted-use" program. This means that:

- The program cannot be deleted or copied to the program memory of a washer extractor.
- You cannot modify the program or examine its structure.
- To run the program you must have access to the memory card, and insert it into the card reader when the program is to be started.

What happens when a program is copied?

Both the memory card and the program control unit have memory chips capable of storing wash programs. The chip on the card can hold about 10 to 15 programs of normal size, while the chip in the program control unit has a capacity of several hundred programs.

When a program is copied from a memory card to the machine's program control unit, it is copied, not moved (not deleted from the card). A copy is transferred from the chip on the memory card to the storage chip of the machine program control unit.

3615

The program remains on the memory card, but another copy of it has now been stored in the program control unit.

Press any key other than SELECT.

If you want to delete all programs on the memory card (with the exception of any restricted-use programs):

Press **SELECT**.

Maintenance

However, the following measures should be carried out at regular intervals and to the extent determined by the operating outlet.

Daily

- Check that the door lock is working normally.
- Check that the door does not leak. Clean the door sealing disk of detergent residue.
- If the machine has an automatic dispenser: clean this (including scoops) of detergent residue.
- Check that the drain valve is not leaking and that it opens and closes normally.
- Check the compressed air regulator. If necessary empty separated water.

Every third month

- Ensure that the external switch is “OFF”.
- Remove rear and side panels.
- Check that hoses and connections are not leaking.
- Check that the drive belts are undamaged and properly tensioned. If necessary adjust the drive belts.

6

	EX6102c	EX6135c	EX6200c	EX6250c
X	15 mm	10 mm	23 mm	23 mm
F	20 N	90 N	75 N	75 N

7

- Clean the filters at the steam and water connections.

3457

4138

- 8
- Check that the imbalance switch's control arm is not bent or damaged, and that it is correctly adjusted. The control arm should be 10 mm from the two adjusting screws and should touch the screws' mounting plate (on an empty machine).
 - Clean the filters at the steam and water connections. Empty the compressed air connection's water separator.

- 9
- The machine is supplied with equipment for lubricating axle seals: check the oil level in the container. If the level is too low, the machine will stop and an error message will appear in the display. Fill with oil if necessary (Hydraulic oil Binol Hydrap or equivalent).
 - Reinstall the cover plates after completing checks.

Every six month

- Make sure that the external switch is "OFF" before removing the machine's protective panels.
- ⑩ • Then remove the rear panel. Lubricate the drum shaft with a grease gun.
- Check oil lubrication container.
- If empty the unit has to be changed
- ⑪ • Remove the cover (1) over the pump unit.
- ⑫ • Remove the jumper (2) on the electrical connection.

- 13 • Pry off the switch panel cap.
- 14 • EX6102c and EX6135c
Set switches 2 and 7 to the "ON" position,
2 = 2 months and 7 = switch on.
- EX6200c and EX6250c
Set switches 1 and 7 to the "ON" position,
1 = 1 month and 7 = switch on.
- 15 • Connect the cable on the new pump unit.
- Mount the switch cap and the oil pump cover.
- Mount the unit in the machine.

Weighing equipment

Description

13 The weighing equipment comprises the following units:

- A scale unit located inside the machine's left-hand rear side panel
- Four load cells, one in each corner of the frame
- Wiring

The weight of the wash load is registered by the four load cells, which send analogue signals to the scale unit. In the scale unit the signals are processed and converted to a weight value in an analogue-digital converter. The weight value is transmitted via a serial interface to the CPU board. The weight is then shown on the display.

Weighing the load allows the water level to be adjusted automatically according to the actual weight of the load, i.e. the water level is reduced during washing if the machine does not have a full load. The consumption of water and energy can thus be reduced.

Safety rules

The weighing equipment is a precision measuring device and must be treated as such.

- Never spray water directly onto the load cells and scale unit.
- The load cells are vulnerable to impact.
- The load cells are potentially vulnerable if welding is carried out. If welding has to be done on the washer extractor, attach the earth cable clamp as close as possible to the welding site.

After a power-cut

When the supply is restored after a power-cut, the weight display will show "0" if the load inside the drum is less than 6.25 kg. If the load weighs more than 6.25 kg, the true weight of the load will be shown.

5955, 5879

Water level reduction

To achieve optimum load volumes, the weight of the load can be seen on the display while the machine is being loaded. If the machine does not have a full load, the water level will be reduced according to a water-level reduction table. However the water level can never be lower than the safety level plus the hysteresis.

Actual weight display

- 14 The Clarus control unit automatically detects if weighing equipment is connected, and the actual (current) weight is shown on the display, on one line of the menu (normal display mode).
- 15 When the machine starts to be loaded, the display switches to showing the actual weight in large numerals (weight display mode).

Normal display mode is resumed:

- If a new program number is entered using the numeric keys.
- If  is pressed.
- Automatically after the time set via "Settings 1" under "Time for weight display".

While a wash program is running, you can switch to weight display mode by selecting "Show weight", see the section "Show weight" under "Machine operation".

The weight shown on the display will always be the net weight (achieved because the weighing equipment has been "tared"). A slight delay is built in to prevent the display from flickering.

Resetting the weighing equipment

- 14 If the display does not show the weight (in an empty machine) as zero after a program, the weighing equipment can be reset to zero using the TAR key.

For a description of the functions used to set and check the tare value, see the section headed "Scale adjustments" under "Machine operation".

Calibrating the weighing equipment

The “Zero calibration” function is used to increase the accuracy of the weighing equipment. This should be done once a month. See the section headed “Zero calibration” under “Machine operation”.

If a new scale unit is installed, it must be calibrated as described in the section “Calibrate the scale” under “Machine operation”.

Checking accuracy of weighing equipment display

Twice a year you need to check that the weighing equipment is displaying the accurate weight, with the aid of an object of known weight. If the weighing equipment does not show the real weight of this object, you will need to follow the “Zero calibration” procedure, a function in the Clarus software. Follow the instructions under “Zero calibration” in the “Machine operation” section of the manual. If this is unsuccessful, the weighing equipment will have to be recalibrated using the “Calibrate the scale” function, as described under “Machine operation”.

If the weighing equipment has a fault

Follow the troubleshooting procedure under the heading “Fault-finding, weighing equipment”.

If you cannot rectify the problem with the help of that section, make a note of the weighing equipment version number before you contact the service department.

To find the weighing equipment version number, access the service program, select “Scale adjustments”, then “Read version number”.

The dead load selector

- 16 The dead load selector, located in the scale unit, is used for setting the machine's "dead load".

The dead load is the load (weight) to which the load cells are subjected before any load is placed in the wash drum. The dead load selector is set before the machine leaves the factory, and its setting should not normally be changed.

EX6102c	1000-1450 kg
EX6135c	1200-1600 kg
EX6200c	2100-2550 kg
EX6250c	2100-2550 kg

If calibration of the weighing equipment should fail, one possible cause can be that this selector is incorrectly set.

To replace a load cell

- 17
- Machines without tilt function: Remove nut + bolt (A).
- Use a suitable jack to lift under the frame at the corner where the load cell is to be replaced.
- Insert a suitable object as a chock beneath the frame, to remove risk of injury and machine damage.
- Machines with tilt function: Remove nut + bolt (A) and remove the wheel.
- Remove bolt (B). Use a socket wrench to remove the bolt.
- Disconnect the load cell cable at the scale unit and remove the strap.
- Remove nuts and bolts (C).
- Remove the faulty load cell and fit the new, assembly is reverse of dis-assembly.

Install the new load cell as indicated by arrow on side of load cell, see figure!

17

Illustration shows a machine with the tilt function.

To replace the scale unit

- 18
- Remove the machine's left-hand rear side panel.
 - Disconnect the six connectors to the scale unit.
 - Take the scale unit off its mounting plate.
 - Install the new scale unit, assembly in reverse order of disassembly.
 - Check that the dead load selector is set to:

EX6102c	1000-1450 kg
EX6135c	1200-1600 kg
EX6200c	2100-2550 kg
EX6250c	2100-2550 kg
 - Calibrate the weighing equipment, see "Calibrate the scale" under "Machine operation".

Component locations

5879

19	A90	Scale unit

	X402	Communication with CPU board
	X410-413	Load cells

Fault-finding, weighing equipment

Error message on display:

Weight, kg:	999,9 eller -999,9
--------------------	---------------------------

Probable cause:

The weighing equipment is overloaded/ "underloaded", i.e. the load cells are sending a signal which is too high/low to the scale unit. Probable cause is one or more load cells faulty. The dead load selector may be on the wrong setting. Alternatively, the machine may not have been installed correctly.

Fault-finding procedure:

- Check that all service connections to the machine are flexible.
- 20 • Remove the left-hand rear side panel. Check that the dead load selector is set to:
 EX6102c 1000-1450 kg
 EX6135c 1200-1600 kg
 EX6200c 2100-2550 kg
 EX6250c 2100-2550 kg
 If it is not, set it correctly and calibrate the weighing equipment according to "Calibrate the scale" under "Machine operation".
- If the weight displayed is -999.9, try following the "Zero calibration" procedure (described under "Zero calibration" in the "Machine operation" chapter).
- Remove the side panels and check that the load cells are unobstructed. Remove any mechanical obstructions.
- Taking the load cell cables one at a time, disconnect the cable connecting each load cell to the scale unit. Continue one by one until a stable weight parameter is displayed (but not 999.9). When this stable parameter is displayed you will know which of the load cells must be faulty.

Fig.
20

- If more than one load cell is faulty, the faulty cells can be identified using a multimeter on the scale unit weight-totalling board to check each cell in turn, as follows:
 - Remove the four screws on the scale unit cover.
 - Check that the four load cell cables are connected to the scale unit.
 - Measure the voltage at the connectors on the weight-totalling board, between terminal 2 and 3 for each load cell. The normal value for an unladen machine is approx. 3-5 mV (DC). A value different from this indicates that the load cell is faulty.
 - Replace the faulty load cell(s) as described under “To replace a load cell”.

Menu line which should show actual weight not displayed.

Possible causes:

The option "DISPLAY WEIGHT ALLOWED" may be switched off (have the answer "No" alongside) in "Settings 1". Possible fault in communication with CPU board or display. The fault can also be in the scale unit.

Fault-finding procedure:

- Check in "Settings 1" that the option "DISPLAY WEIGHT ALLOWED" has "Yes" alongside.
- Check that the cables/wiring for CPU communication and power supply are connected to the scale unit and in good condition.
- If the washer extractor appears to be working normally apart from the absence of weight parameter display, try replacing the scale unit as described under "To replace the scale unit".

The weighing equipment is not displaying accurate weight values.

Probable cause:

Probably a faulty load cell.

Fault-finding procedure:

- Place an object of known weight at one corner on top of the washer extractor. Check the weight shown on the display. Move the weight to each of the other corners of the machine in turn, checking the display each time. If one corner is different from the others, this will reveal which load cell is faulty.
- Check that the load cell in question is mechanically unobstructed, free of anything which could affect its normal functioning.
- Replace the load cell as described under "To replace a load cell".

Error message on display:

Failed. Press SELECT.

Possible causes:

Dead load selector or calibration switch incorrectly set. An incorrect calibration weight has been used for calibration.

Fault-finding procedure:

- 21 • Check that the dead load selector is set correctly.
- If you are or have recently been calibrating the weighing equipment, the calibration switch may be incorrectly set, or an incorrect calibration weight may have been used for calibration.

Check that the calibration switch is set correctly. It should normally be set to NORM. During calibration the switch should be set to CAL.

The calibration weight should be between 40 and 400 kg.

If relevant/necessary, calibrate the weighing equipment, or follow the “Calibrate the scale” procedure under “Machine operation”.

- Check that all cables/wiring to the scale unit are sound and correctly connected.

Message on display:

Function not allowed.

Probable cause:

A function has been selected in the program which cannot be carried out.

Fault-finding procedure:

- Check that the function in question is switched on under “Settings”.
- Check that the cables for CPU communication, power supply and load cells are connected.
- Check that these cables are all in good condition.
- If any cable is faulty, replace it.

Message on display in service program:

Weighing equipment not connected.

Probable cause:

CPU board not communicating with scale unit.

Fault-finding procedure:

- Check that the connectors for CPU communication, power supply and load cells are connected on the scale unit.
- Check that their cables are all in good condition.
- If any cable is faulty, replace it.

To keep your machine in proper working order, follow the preventive maintenance recommendations provided below.

The maintenance interval should be adjusted according to machine usage. The suggested schedule assumes an 8 hour work day, and a 5 day work week..

Daily

- Check the door and door lock:
 - Open the door and try starting the machine. The machine **MUST NOT START**.
 - Close the door, start the machine and try opening the door. It **MUST NOT BE POSSIBLE TO OPEN THE DOOR WHILE THE MACHINE IS OPERATING!**
 - Check that the door does not leak.
 - Clean the door seal, removing any detergent and fluff.
- Check that the drain valve does not leak during the wash cycle.
- Clean out any detergent remaining in the detergent compartment. Rapid advance through a program and let the water rinse the compartment.
- Inspect liquid chemical tubing and connections for leaks. Repair as necessary.

Every third month (refer this service to qualified personnel)

May only be carried out by authorized personnel.

- Check that the door does not leak.
- Check the drain valve and remove any lint.
- Inspect the interior of the machine (during an actual wash cycle to ensure that no leaks are noticed) by:
 - Turning of the main power switch of the machine.
 - Remove the top cover and the protective front and rear plates.
 - Cover the detergent dispenser to prevent water from splashing inside the machine.
 - Start a wash program.
 - **KEEP CLEAR OF MOVING PARTS WHILE MACHINE IS OPERATING!!**

- Inspect all internal hoses, seals and gaskets for signs of leakage. Repair as necessary.
- Check that water inlet screens are clean of debris. Dirty screens result in longer fill times, which reduce productivity.
- Inspect the drive belt. Adjust the tension or replace if necessary.
- Check that there are no signs of leakage on the floor beneath the machine. Locate and repair any leak.
- On heated machines, if the heating time is unusually long, check the heating elements. If the water is very hard, check whether there are lime deposits on the heating elements. Decalcify the elements if necessary. Adapt the amount of deliming agent to the manufacturer's guidelines.
- Never switch on the heating elements when there is no water in the machine. This will cause the slow-blow fuse to trigger.
- Inspect the shock absorbers and coil springs.
